(200 words)

Please describe what you have learned and feel impressed about the work, people and life. Give suggestions and tips to other students who are interested in applying for the opportunity.

In this internship in UT Dallas, I learned not only English conversation and social skills, but also some different things we had never studied in Wenzao. For example, reimbursement and budget. Through these tasks, we need to check the accounting records form excel sheets, and classify these documents efficiently and correctly. We used many critical thinking while we are working. That is an important part that I learned a lot in American environment. The thing I feel impressed about the work is introduce myself to the donors in public through the official meeting. It was my first time to introduce myself to these big shots from different places. I felt a little bit nervous but it's really a good chance to grow up.

Through this internship, I experienced different American culture in person, just like trick or treating on Halloween, and went to the state fair of Texas. We also have many flexible times to explore the other cities. The activity I feel the most impressed is the trip in Austin. It is a

beautiful city full of Latin American culture style. Not only the views, but also the foods are definitely worth visiting.

From my suggestions to the students who are interested, I think to be independent and fearless are the tips if you live abroad. Everything is new for you, so you must have the ability to adapt the new environment and give yourself a chance to try. When you meet any problems, don't hesitate to ask. However, it will be better if you try to come up with the solution yourself before you ask. At last, keep curiosity and have an enthusiastic mind, so that you can discover more objects beyond your imagination.
